# Executive Summary

### Project Goal

Build a premium all-in-one ecommerce solution using Laravel backend and Vue frontend, starting from a polished homepage and growing into a complete customer/admin commerce system.

### Store Type

Single-vendor ecommerce store with Bangladesh-first delivery, COD-first checkout, manual mobile payment flow, and SSLCommerz-ready online payment path.

### Frontend Standard

Premium responsive UI, English/Bangla toggle, light/dark mode, Font Awesome icons, product imagery, mobile drawer navigation, and sticky ecommerce header.

### Backend Standard

Laravel API foundation with catalog, cart, checkout, customer account, admin operations, reporting, permissions, rate limiting, backup, deployment readiness, and automated tests.

# Phase By Phase Work

| Phase | Status | Main Outcome |
| --- | --- | --- |
| Phase 0 | Complete | Defined business rules: single vendor, COD first, SSLCommerz/bKash/Nagad/card priority, Bangladesh delivery zones, returns, stock, pricing, order statuses, phone/email login. |
| Phase 1 | Complete | Core Laravel + Vue foundation, migrations, models, seeders, storefront architecture, demo catalog and homepage structure. |
| Phase 2 | Complete | Customer flow: cart, checkout, authentication, profile, addresses, order history, tracking, returns, reviews, wishlist, support dashboard. |
| Phase 3 | Complete | Admin dashboard at /admin/dashboard with catalog, orders, inventory, customers, marketing, reports, permissions, settings, and operational modules. |
| Phase 4 | Complete | Payment/delivery/fulfillment foundation: COD, bKash/Nagad manual proof, SSLCommerz flow, shipments, returns, refunds, delivery zones. |
| Phase 5 | Complete | Storefront dynamic behavior: product links, filters, campaign routes, category/budget/search deep links, dynamic homepage-driven sections. |
| Phase 6 | Complete | Marketing and growth: newsletter leads, popular searches, homepage CMS/admin controls, reviews/wishlist insights and customer signals. |
| Phase 7 | Complete | Admin polish and operational hardening: staff permissions, audit logs, settings, dashboard panels, exports, management flows. |
| Phase 8 | Complete | Launch readiness: QA, security rate limits, performance code splitting, SEO metadata/schema, production headers, backup command, deployment check. |

# Customer Storefront Features

### Homepage

- Announcement bar
- Main header with search/cart/account
- Category navigation
- Hero campaign
- Trust/service strip
- Shop by category

### Merchandising

- Flash sale
- Featured collections
- Best sellers
- Promotional banner
- Popular products
- New arrivals

### Discovery

- Official brand stores
- Shop by budget
- Recommended for you
- Trending categories
- Seasonal collection
- Popular searches

### Catalog

Product listing with keyword search, category filter, brand filter, budget filter, sorting, pagination/lazy exploration, product cards, prices, ratings, wishlist, and add-to-cart actions.

### Product Detail

Product page with gallery, variants, SKU, stock state, oversell/backorder support, delivery information, return/refund eligibility, reviews, wishlist, add to cart, and buy now.

# Cart, Checkout And Payments

### Cart

- Cart drawer/page foundation
- Add, update, remove, clear items
- Product variant support
- Cart totals and quantity state
- Authenticated and guest-safe API flow

### Checkout

- Customer details
- Shipping address
- Delivery zone charge
- Coupon preview
- Order summary
- Order placement

### Payment Priority

- Cash on Delivery first
- SSLCommerz gateway-ready
- bKash manual proof
- Nagad manual proof
- Card payment placeholder
- Payment result page

### Order Flow

- Pending
- Confirmed
- Processing
- Shipped
- Delivered
- Cancelled / Returned

# Customer Account Features

### Authentication

- Register
- Login
- Phone/email login support
- Password update
- Profile update
- Logout

### Dashboard

- Premium customer dashboard layout
- Side navigation
- Orders overview
- Addresses
- Returns
- Support tickets

### Engagement

- Wishlist
- Product reviews
- Verified purchase context
- Order tracking
- Mobile payment proof status
- Customer care access

# Admin Dashboard Features

### Admin Route

Dedicated admin dashboard lives at **/admin/dashboard**. It does not use the landing page header and is protected by auth/admin middleware and permissions.

### Catalog

- Products
- Variants
- Images
- Categories
- Brands
- Homepage sections

### Operations

- Orders
- Payments
- Inventory
- Shipments
- Delivery zones
- Returns/refunds

### Growth

- Coupons
- Marketing
- Newsletter leads
- Popular searches
- Reviews
- Wishlist insights

### Reports

- Sales reports
- Customer reports
- Product performance
- Fulfillment reports
- Payment export
- Inventory alerts

### Security

- Admin permissions
- Staff users
- Audit logs
- Protected API routes
- Rate-limited actions
- Active/inactive admin state

### Settings

- Store settings
- Payment config surface
- Delivery config
- Homepage control
- Operational health
- Admin quick actions

# Bangladesh Market Readiness

### Delivery

Bangladesh district/area based delivery zones, delivery charge rules, estimated delivery days, COD availability and fulfillment tracking.

### Returns

Return request system with refundable/non-refundable product rules, return window support, admin review, refund context and status tracking.

### Payments

COD-first checkout, SSLCommerz-ready online flow, bKash/Nagad manual payment proof submission and admin verification workflow.

### Localization

English/Bangla UI toggle, Bangladesh-friendly prices in Taka, localized campaigns like Eid, Ramadan, Pohela Boishakh, monsoon, winter and back-to-school.

# Technical Quality And Launch Readiness

| Area | Implemented |
| --- | --- |
| Security | Login/register/cart/checkout/newsletter/order tracking rate limits, admin auth, permissions, production headers, secure session cookie defaults. |
| Performance | Vue code splitting for below-the-fold homepage sections and route-level pages. Main JS bundle reduced from about 572.82 kB to about 119.31 kB. |
| SEO | Base Blade meta, canonical URLs, Open Graph/Twitter cards, robots handling, homepage Organization/WebSite schema, product Product/Offer schema. |
| Backup | Command: php artisan commerce:backup. SQLite local snapshot, manifest, configurable retention, production scheduler hook. |
| Deployment | Command: php artisan commerce:deploy-check. Checks app key, production flags, HTTPS, queues/cache, DB, migrations, admin, build manifest, storage link, COD, backup and SSLCommerz state. |
| Testing | Final suite: 216 passing tests and 1320 assertions. |

# Useful Commands

### Run App

php artisan serve
npm run dev

### Build Frontend

npm.cmd run build

### Run Tests

php artisan test --compact

### Format PHP

php vendor/bin/pint --dirty --format agent

### Backup

php artisan commerce:backup

### Deploy Check

php artisan commerce:deploy-check --production

# Demo Access

### Admin

Email: admin@aurelia.test
Password: Admin@12345

Demo credential only. Change before any real production launch.

### Customer

Email: test@example.com
Password: password

Seeded customer account for local testing.

# Before Real Launch

- Set live production domain and HTTPS certificate.
- Configure production .env with APP_ENV=production, APP_DEBUG=false, APP_FORCE_HTTPS=true.
- Use real database hosting and run migrations/seeds safely.
- Replace demo admin/customer credentials.
- Add real SSLCommerz, bKash, Nagad, mail and SMS credentials.
- Configure queue workers, scheduler, backups and monitoring on the server.
- Confirm real payment methods, delivery promises, return policy and support hours before showing them publicly.
